

Handheld Wood Moisture Meter

Special Features:

- Light Weight
- High Accuracy
- Large LCD Display
- Long Battery Life
- Data Hold Option
- Fast Response Time

Description:

The moisture meter is an electronic device mounted in a shaped plastic case. It is powered by a 9V battery, which is housed in a compartment in the lower rear part of the case and secured by a 'clip in' sliding lid. The sensing probes are two steel pins mounted in the top edge of the unit. Until required to be used these pins are covered by a plastic cap, neatly shaped to follow the contours of the casing. The moisture content (expressed as a percentage) is shown on a LCD display mounted in the front surface of the unit. The LCD display is specifically assigned to indicate 'power on' or 'low battery power'.

Performance Specifications:

Operating Temperature	: -10 ⁰ C ~ 50 ⁰ C
Humidity Range	: 5% RH ~ 40% RH
RH Accuracy	: +/-1%
RH Resolution	: 1%
Sampling Rate	: 2 time / per second
Data Hold	: Yes
Low Battery Indication	: Yes
Power Supply	: 9V Battery (6F22)
Weight	: 104 gms
Dimensions	: 126 x 70 x 29 mm
